

Summary Order Execution Policy

Summary Order Execution Policy

1. Introduction

- 1.1. By agreeing to the terms of our “User Agreement” (the contractual agreement that a client enters into when opening an account with CH Ltd (“CH”, “we”, “our”, “it”, “Company”)), you are also agreeing to the terms of this Summary Order Execution Policy (“Policy”) which forms part of the “Client Agreements” as defined in the User Agreement and this Policy should be read in conjunction with the User Agreement; if there is anything you do not understand please contact the customer support department of the Company.
- 1.2. In the event of a disagreement between this Policy and the User Agreement, then the User Agreement shall prevail.

2. CH Ltd

- 2.1. CH is authorized and regulated by the NFA under license number . 0521634, under the Securities Act 2007.
- 2.2. CH offers contracts for differences (“CFDs”) across a range of asset classes: FX, Equity, Commodity, Indices, ETFs (“Exchange Traded Funds”), Options and Cryptocurrencies, to retail clients only.
- 2.3. Trades are directly booked with CH via an online trading platform only (there is no facility for telephone or face-to-face trading), and CH is the counterparty to clients’ trades. In other words, CH transacts with clients as principal on the basis of a quote. This means that you must open and close every trade with CH and cannot close an open trade with a third party. CH is therefore the sole execution venue for trades executed by it for you.
- 2.4. CH decides which CFDs to make available on the CH Trading Platform and to publish the quotes at which such financial instruments can be traded. CFDs are derivatives - bilateral and bespoke products - traded over-the-counter (“OTC”), thus by placing an order on the CH platform, you are providing your explicit consent to your orders being executed outside a regulated exchange or multilateral trading facility (“MTF”).
- 2.5. All prices offered by CH are provided by its parent company, CH Ltd.
- 2.6. All trades are executed by CH using the CH Ltd trading platform and for each trade an identical hedge trade takes place between CH and CH Ltd.

- 2.7. CH acts as the sole execution venue and as principal in all your trades which are bilateral transactions between it and you. Accordingly, there is no aggregation, allocation or re-allocation of your and/ or CH's own account Orders or transactions.
- 2.8. All trading activity is 100% automated, in respect of both you and CH, which ensures the prompt, fair and expeditious execution of client Orders, relative to other Orders or CH's own trading interest. All Orders are promptly and accurately recorded and allocated in strictly sequential order, unless the characteristics of the Order or prevailing market conditions make this impracticable or your interest requires otherwise. CH will promptly inform you about any material difficulty relevant to the proper carrying out of Orders upon becoming aware of the difficulty.
- 2.9. All executed trades are immediately viewable on your account, as is the 'profit and loss' associated with closed trades, and as processes are fully automated all sufficient steps are taken to ensure accuracy, which is guaranteed subject to quality of the raw data.
- 2.10. CH will take all sufficient steps to ensure the best possible result when executing your instructions.
- 2.11. When executing your orders, we will take all sufficient steps to achieve the best possible outcome for you by executing those orders according to this Policy and subject to any specific instructions received from you. This Policy comprises a set of procedures that are designed to obtain the best possible execution result, subject to and taking into account the nature of your orders, the specific instruction you have identified to us in relation to filling of those orders. The client acknowledges that our price may differ from any price which is or might have been available elsewhere.

3. Order Execution Policy

- 3.1. In providing best execution CH is required to take into account certain execution factors. Where CH executes an order on behalf of a client, the best possible result is determined in terms of the total consideration representing the price of the financial instrument and the costs associated with the execution, which must include all expenses incurred by the client which are directly related to the execution of the order .
- 3.2. In assessing the relative importance of the execution factors, the following criteria are taken into account:
 - The characteristics of the clients (including the client's categorisation);
 - The characteristics of the client order (including, the size and nature of the order);
 - The characteristics of the financial instruments that are the subject of that order; and
 - The characteristics of the execution venue to which that order can be directed.

Not all of these criteria will be relevant in each case or are relevant to the CH business model, for example: CH is the sole execution venue for trades executed by it for its clients.

- 3.3. The execution factors that are considered and their relative importance are set out below. We have rated price and costs as the most important execution factor, followed by: speed, likelihood of execution and settlement, size and nature and market impact. The relative importance attached to these execution factors does not differ across the asset classes traded by CH.

4. Price

- 4.1. The price for a given contract is calculated by reference to the price of the relevant underlying financial instrument. For any given financial instrument CH will quote two prices: the higher price (“ASK”) at which the Client can buy (long) that financial instrument, and the lower price (“BID”) at which the Client can sell (short) it.
- 4.2. This price is obtained through CH Ltd from a range of independent third party reference sources, various nominated independent financial market data providers, who source their price feeds from relevant exchanges (for more information please refer to Paragraph 10.2.(i) below).
- 4.3. Various providers are used in order to avoid over-reliance on a single provider and to ensure protection against data redundancy, and are prioritised for each individual financial instrument according to past performance in providing a consistent service, taking into account factors such as frequency of updates and reliability.
- 4.4. Where this is a futures price it is impacted by relevant market factors such as, but not limited to, proximity to the expiry of the current contract.
- 4.5. All current prices can be found on the Company’s website (<https://www.uschltd.com/>) or trading platform.
- 4.6. The Company updates its prices as frequently as the limitations of technology and internet connectivity allow. The Company reviews its third party external reference sources to ensure that the data obtained continues to remain competitive.
- 4.7. If the price reaches an order set by you such as: “Close at loss”, “Close at Profit”, “Trailing stop”, “Market Order” (as defined below in this document), these orders are instantly executed. Under certain trading conditions it may be impossible to execute orders at the client's requested price. In this case, the Company has the right to execute the order at the first available price. This may occur, inter alia, for example during the market opening, during news time, during volatile markets where prices may move significantly up or down and away from declared price and at times of rapid price fluctuations if the price rises or falls in one trading session to such an extent that, under the rules of the relevant exchange, trading is suspended or restricted.

4.8. If a Limit Order is placed to Buy a certain instrument at a price higher than the current market price, the order will be executed at a price, which can be the same or higher than the price indicated by you. Similarly, if a Limit Order is placed to Sell a certain instrument at a price lower than the current market price, the order will be executed at a price, which can be the same or lower than the price indicated by you. If a Limit Order is placed to Buy a certain instrument at a price lower than the market price, the order will be executed at a price, which can be the same or lower than the price indicated by you. If a Limit Order is placed to Sell a certain instrument at a price higher than the market price, the order will be executed at a price, which can be the same or higher than the price indicated by you.

5. Costs

- 5.1. For all financial instruments a Spread is applied by the Company on the quoted prices. The Spread may take into account factors such as liquidity and volatility conditions in the underlying markets. You should always check the applicable Spread and make sure you are aware of an instrument's properties before you start trading.
- 5.2. Further information in relation to the spreads for each instrument may be found via the 'details' link for each specific instrument on the trading platform and the 'FAQ' section of the website. In certain circumstances (such as increased volatility or illiquidity in relation to the underlying market concerned) CH reserves the right to alter the spreads offered.
- 5.3. In other circumstances, clients may be charged overnight funding fees, and adjustments made in respect of dividend payments and other corporate action. Further information on the fee calculations is set out in the User Agreement, the 'details' link for each specific instrument on the trading platform and the 'FAQs' section of the website.
- 5.4. Any open futures trade held at the end of the contract may be rolled over to the next trading period. Where an automatic rollover occurs, the original position remains open and continues trading on the next contract. In these cases, an adjustment is made to the client's equity in order to reflect the difference between prices of the expired and new contract. CH may also make a spread adjustment at the time of rollover, in which case the client will be notified both before and after the rollover. Further details are available via the 'details' link for each specific instrument on the trading platform and the 'FAQs' section of the website.
- 5.5. CH will also charge a premium for 'Guaranteed Stop Orders', via a wider spread. This feature forces trades to close at the client's chosen rate (price) even if the market price surpasses it ('gaps'). Once the stated level is reached, the trade automatically closes. This feature is not available for all instruments, and full information is provided to clients both in the 'FAQs' on the website and in the instrument details on the trading platform prior to the placing of the trade.

- 
- 5.6. CH will charge a Currency Conversion Fee for all trades on instruments denominated in a currency different to the currency of your trading account. For any conversion required to be effected from one currency to another for your trades, the Company is entitled to charge a Currency Conversion Fee of up to 0.7% of the trade's realised net profit and loss. Such Currency Conversion Fee may be subject to change, and it will be reflected in real time into the unrealised net profit and loss of an open position and will be charged once the position is closed.
 - 5.7. CH may charge a commission in the trading account's balance at the opening and closing of CFD positions on shares. The commission is calculated as a percentage of the position value or as a minimum amount, according to the instrument's currency. If the commission percentage of the position value is less than the minimum amount, the minimum amount will apply. For further details on the Share Trading Commission, refer to Section 12.3 of the User Agreement and our website.
 - 5.8. CH strives to charge clients competitive costs and fees for the provision of its services.

6. Speed and Likelihood of Execution and Settlement

- 6.1. In almost all circumstances, under normal market conditions and as long as the client has sufficient margin available on their account for the trade and so long as the trade size requested is equal to or under the maximum size permissible, the trade will be executed at the level requested.
- 6.2. In certain circumstances, for example: speed of internet communications and market volatility; where the quoted price is no longer representative of the 'underlying market' price, but within a predetermined permitted tolerance level, then the client's trade will be executed at the best price available at that time, irrespective of whether the market movement is in a beneficial or detrimental direction, in accordance with CH's Order Execution Policy. However, when volatility is such that the price has moved more than the predetermined permitted tolerance levels, then the client's trade request will be rejected.
- 6.3. Slippage can occur at any time, but is most likely to occur during periods of high volatility, overnight and at market open.
 - (i) It occurs when the market moves suddenly in any direction, and in the time taken for a client's acceptance of a price to be received, that price is no longer available and the client's trade is executed at the best price available at that time.
 - (ii) This applies in the event of either advantageous or disadvantageous price movements.
 - (iii) Slippage is the difference between the expected price of a trade, and the price at which the trade was actually executed.

- (iv) The price is then said to have ‘slipped’ from one level to another, as the market has ‘gapped’ from one level to another.
 - (v) In most cases an Order, when triggered by market price action, will be filled at the same, or very close to the same price as requested.
 - (vi) If the market ‘gaps’ overnight, it will open at the start of the trading day at a price different to the closing price of the previous trading session.
 - (vii) Any Order whose activation price is between CH’s closing quote of the previous day’s trading and their opening quote of the next day’s trading session, will be filled at the first price CH can reasonably obtain with reference to the underlying market.
 - (viii) If any market gaps from one quoted price to another due to any market sensitive piece of information (such as a profit warning or an economic data release), then any Order in place between these prices will be activated.
- 6.4. The execution price of any Order affected by price sensitive information will be subject to general exchange rules.
- 6.5. The likelihood of execution of Clients orders depends on the availability of prices of other market makers/financial institutions and certain risk management limitations and defence levels (i.e. maximum order size). In some cases it may not be possible to arrange an Order for execution during abnormal market conditions, for example but not limited to the following cases: overnight, during news times, trading session start moments, during volatile markets where prices may move significantly up or down and away from declared prices, where there is rapid price movement, where there is insufficient liquidity for the execution of the specific volume at the declared price, a force majeure event, as defined in section 16.1 of the User Agreement, has occurred.
- 6.6. In the event that the Company is unable to proceed with an Order with regard to price or size or other reason, the Order will not be executed. In addition, the Company is entitled, at any time and at its discretion, without giving any notice or explanation to the Client, to decline or refuse to transmit or arrange for the execution of any Order or request or instruction of the Client in circumstances explained in the User Agreement.
- 6.7. A trade which has a Guaranteed Stop Order set against it will be closed at the exact specified level if it is reached.
- 6.8. CH does not accept any Market Orders outside the market hours of the relevant underlying financial instrument. All CFD instruments are traded in accordance with the trading hours of the exchange on which the underlying financial instrument is traded.
- 6.9. CH will accept Limit Orders outside the market hours of the relevant underlying financial instrument; the execution of your Limit Order will take into account the conditions offered at the time the Order would be expected to execute, as opposed to the time the Order is placed. This includes but is not limited to the leverage ratio or the maximum number of units, which may be different from the time the Order was placed.

- 6.10. The Financial Instruments offered by the Company are CFDs which do not involve the delivery of the underlying asset. CFD trading can only be settled in cash. The Company shall proceed with the settlement of all transactions upon the execution and/or time of expiration of the specific transaction.
- 6.11. At times of low or zero liquidity, or a halt or suspension of trading on the markets or Exchange on which the underlying product is traded, we reserve the right not to execute your order.

7. Trade size and nature

- 7.1. The actual minimum size of an order may be different for each type of Client Account.
- 7.2. CH will not make a 'partial fill' of any trade.
- 7.3. CH allows you to 'partially close' any of your open positions given that the size of your position is above the minimum size possible. If you choose to use this feature, you will be able to choose the size (amount) of an open position you wish to close as an alternative to closing an open position in its entirety.
- 7.4. Every market quoted by CH has an absolute minimum and maximum permitted trade size. The minimum size of trade can be found by selecting the 'financial instrument details' tab on the trading platform; and the maximum size of trade is dependent not only on normal market size and market conditions, but also internal risk management factors and is, at all times, at the discretion of CH.

8. Trades and Orders

- 8.1. There are three types of instructions/orders that a client may give to execute or initiate a trade with CH.
 - 8.1.1. Market Order (trade request) - This is where a client gives an instruction to immediately buy or sell at a currently available price.
 - 8.1.2. Limit Order (Pending Order) - This is where a client gives an instruction to open a buy or sell position if the price reaches at a specific price which is pre-set by the clients. The client can set this specific price above or below the current market price and the position will automatically open only once the requested rate is reached or surpassed. This instruction will expire in 90 days if a position has not been opened.
 - 8.1.3. Stop Orders
 - 8.1.3.1. Close at Loss Order (Stop Loss Order) - This instruction allows a client to set a specific rate at which their positions will close at, in case the price moves against the positions in order to limit its loss. Once the 'Close at Loss' rate is reached, the stop order will be executed and the position will close. Close at Loss orders do not guarantee that a position will close

at the exact specific rate that the client has specified. In cases where the market gaps up or down and the market price surpassed the designated stop level, the position will close at the next best available price. If the 'Close at Loss' rate is not reached or surpassed then the stop loss order will not be executed.

- 8.1.3.2. Close at Profit Order (Take Profit Order) - This instruction allows a client to set a specific rate at which the client's position will close at, in order to protect the position's profits. Once this specific rate is reached, the take profit order will be executed and the position will close. Close at Profit orders do not guarantee that a position will close at the exact specific rate that the client has specified. In cases where the market gaps up or down and the market price surpassed the designated take profit level, the position will close at the next best available price. If the 'Close at Profit' rate is not reached or surpassed then the take profit order will not be executed.
- 8.1.3.3. Trailing Stop Order - This instruction is a stop loss order which allows a client to lock profits and limit losses by enabling a position to remain open as long as the price is moving in the client's favour, but as soon as the price changes direction and moves against the position by a specified amount of pips, the position will automatically close at the Trailing Stop level. The Trailing stop level can be set at a number of pips from the current market price and is automatically updated when the market moves in the client's favour. Trailing Stop orders do not guarantee that a position will close at the exact Trailing Stop level. In cases where the market gaps up or down and the market price surpassed the designated Trailing Stop level, the position will close at the next best available price. If the 'Trailing Stop' rate is not reached nor surpassed then the trailing stop order will not be executed.
- 8.1.3.4. Guaranteed Stop Order - This instruction allows a client to set a stop loss order which will force the position to close at the exact specific rate that the client has set in case the price moves against the position in order to limit its loss. Guaranteed Stop order is not available for all instruments and a fee is charged via a wider spread.

9. Specific Instructions

- 9.1. When a client provides CH with specific instructions as to how to execute an Order, CH shall take all sufficient steps to obtain the best possible result when executing that Order, by following the client's instructions.
- 9.2. However, specific instructions provided by clients as to how to execute an Order may prevent CH from taking the steps described in its Order Execution Policy to obtain the best result for the client.

low trading volumes and poor market value that result in a wide bid-ask spread will not generally be available to trade.

- f) As the price is obtained through CH Ltd from a range of independent third party reference sources, various nominated independent financial market data providers, who source their price feeds from relevant exchanges, there are various contingency arrangements that preserve the existence of a price feed from CH Ltd to CH, and onto its clients.

(ii) Costs and Spreads:

As there is only one execution venue, cost is deemed the most important aspect to the client, assuming price movements track the underlying market fairly.

(iii) Speed:

In the event of price slippage between the time that a client requests a trade and its execution, CH operates symmetric price slippage.

- 10.3. CH aims to take all sufficient steps to deliver the best possible result for its clients. There may be instances where it will be apparent that best execution was not provided. There may be legitimate reasons for this, or it may be that CH could have improved the service provided to the client. CH will learn from all incidents, take remedial action to rectify any client detriment and correct any deficiencies identified to ensure that best execution is maintained on an on-going basis.

11. Review of the Order Execution Policy

- 11.1. CH reviews this Policy and its order execution arrangements at least annually. A review will be carried out whenever a material change occurs that affects the firm's ability to continue to obtain the best possible result for its client orders on a consistent basis using the methods described in this Policy.
- 11.2. Any material changes/updates to this Policy and to the Company's order execution arrangements will be notified to you accordingly, as necessary.

12. Contact Details

- 12.1. Full details of the trading conditions, including trading hours, for particular products are available through the details link for each instrument on the CH Trading Platform.
- 12.2. Should you require any further information and/or have any questions and/or reasonable requests for information about the Company's execution policies and arrangements and how these are reviewed, please direct your request and/or questions to our Support Team via our [Contact Us](#) page and we will answer you within a reasonable timeframe.
